CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 86 pages. Dimensions: 9.6in. x 6.7in. x 0.2in. In Department of Defense Energy Strategy: Teaching an Old Dog New Tricks, Col Gregory J. Lengyel, United States Air Force (USAF), takes a comprehensive look at our national energy problems from a perspective unique to the Department of Defense (DOD). From his fictional opening implying that conflicts of the future could revolve around volatile world energy markets to his recommendations on creating and implementing a DOD energy strategy for improved energy security, the reader should find this book both thought provoking and informative. The author begins by introducing our national and military addiction to vast amounts of energy. He adeptly points out that we have created the world's mightiest military but historically have not considered energy to be a critical component of the war-planning process. His discussion of the burdens associated with our energy consumption not only identifies the cost of energy as a commodity but the often overlooked cost of infrastructure, personnel, transportation, and delivery of our energy requirements. Colonel Lengyel also identifies key vulnerabilities caused by our energy dependence: potential oil and electricity supply disruptions due to terrorism, sabotage, physical and cyber attack, and infrastructure failure. Additionally, he highlights areas where our dependence on imported energy creates foreign policy vulnerabilities. In sum, Colonel Lengyel offers an analysis of current DOD energy strategy and proposes a strategy for improved energy security and an implementation plan. He highlights numerous USAF initiatives as a model for the DOD to pursue, such as bases operating on 100 percent renewable energy, Air Force Smart Operations 21 (AFSO 21) fuel savings processes, culture change, and leading the way in synthetic fuel testing and certification. This item ships from La Vergne, TN. Paperback.
