The author introduces students to subjects such as biodiversity, climate change, air pollution, and forestry by presenting the actual data and methods used by experts in these fields. In addition, considerable material on emerging areas such as macroeconomics and trade, agriculture, ecological economics, and sustainability gives students a full understanding of the environmental economics field. The book's focus on basic economic concepts in the introductory chapters prepares students to understand these issues. Chapman does not discuss economics in the abstract: examples, historical contexts, and case studies are used to illustrate key points. And throughout the book, there is a heavy emphasis on social issues and ethics. 415 pp. Englisch.
